

Create me an html file with all the necessary css and java in on consolidated htm file along with any other additional python file servers (asses if we really need one for this project or not), this is an html app where the user will input a screenshot or a pdf of input that looks like the following:

Business	Phone	Email	Website	Owner	Pain Point	AI Opportunity
Ana Molinari Salon Spa Boutique	941-365-1415	ana@anamolinari.com	Yes	Ana Molinari	Manual booking coordination	AI receptionist + automated scheduling
Gallo's Kitchen & Bar	614-754-8176	galloskitchen2010@gmail.com	Yes	Tommy & Nick Gallo	Reservation and follow-up overload	AI reservation assistant + SMS reminders
Ward Family Law, LLC	312-262-5972	info@wardfamilylawchicago.com	Yes	Jennifer R. Ward	Client intake/admin repetition	AI intake automation + document workflows
Hall Family Dentistry	317-204-8096	info@hallfamilydent.com	Yes	Seth Hall, DDS	Missed calls and scheduling bottlenecks	AI receptionist + reminder system
Black Pearl Books	512-902-9717	info@blackpearlbookstore.com	Yes	N/A	Low online engagement	AI chatbot + ecommerce enhancements
Exodus Plumbing	858-544-6064	N/A	Yes	N/A	Emergency call overflow	AI dispatch + automated estimate intake
Sydney Taylor (Lake & Company)	206-218-5818	sydney@lakere.com	Yes	Sydney Taylor	Slow lead response times	AI CRM nurturing + automated follow-up
Independent Auto Care	303-840-4400	N/A	Yes	N/A	Manual appointment handling	AI scheduling + service reminders
Andre's Electric	651-426-3787	N/A	Yes	Andre Dupuis	Manual quote requests	AI quote intake + customer triage
Alpha Family Medicine	762-248-5708	N/A	Yes	Dr. Shyla Reddy	Patient communication bottlenecks	AI patient assistant + intake automation

Then the AI in this html app powered by the API key of the users choice (the API ey is entered and locally saved in the setting part of this html app) will process that info and take it into account, and then it will output ready to go emails for leads for the user, the AI will take into account all of the data from the input pdf/screenshot and spit out an email that follows the additional {email structure} input that the user feeds in, in the {email structure} input section, the user can enter text and attach a screenshot/pdf.

The final output that the app spits out will be in the form of a downloadable pdf with good formatting.
